How to patch WPA2 wireless security vulnerability on Windows 10

1. Click Start Menu.
2. Search for “Update”, then open the “Check for Updates” program.
3. In the window that appears, if updates are available click “Install Now”, then proceed to step 4.
   Otherwise click the “Check for Updates” button if present. If no updates are available after selecting the “Check for Updates” button, skip to step 7.
4. Reboot your computer after installation is complete.
5. After rebooting, repeat steps 1-3 to make sure any residual updates are installed.
6. To verify that the WPA2 security patch is installed, first go back to Update settings by repeating steps 1 & 2.
7. Click “Update History”.
